

## Introduction

This is a standalone application (Windows or Mac) using our [Moneyworks component](#) which is designed to periodically (or manually) connect to Magento and import transactions into Moneyworks. We call this process 'syncing'.

## Entering the customisation code

Available from the *Sync* → *Customisation code* menu item. This code determines which options are available and must be entered first to enable the other menu items.

## Setting up the sync parameters

Available from the *Sync* → *Setup* menu item. This consists of four tabs with settings for the Moneyworks connection and Magento connection parameters, and also some Moneyworks-specific options and advanced options to control the sync process.

## Moneyworks connection parameters
