

Introduction

This is a standalone application (Windows or Mac) using our [Moneyworks component](#) which is designed to periodically (or manually) connect to Magento and import transactions into Moneyworks. We call this process 'syncing', and it is controlled by the *Sync* menu items:

Entering the customisation code

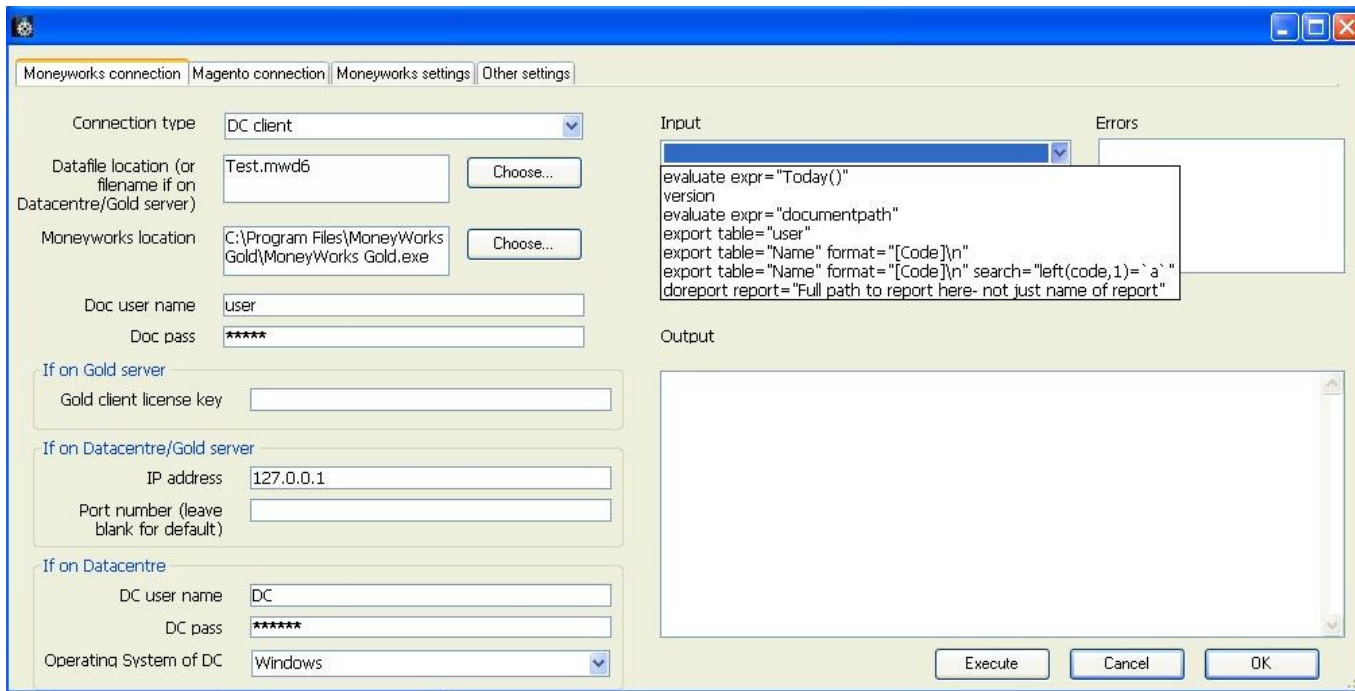

Available from the *Sync* → *Customisation code* menu item. This code determines which options are available and must be entered first to enable the other menu items.

Setting up the sync parameters

Available from the *Sync* → *Setup* menu item. This consists of four tabs with settings for the Moneyworks connection and Magento connection parameters, and also some Moneyworks-specific options and advanced options to control the sync process.

Moneyworks connection

This tab controls how the Moneyworks Connector connects to Moneyworks:

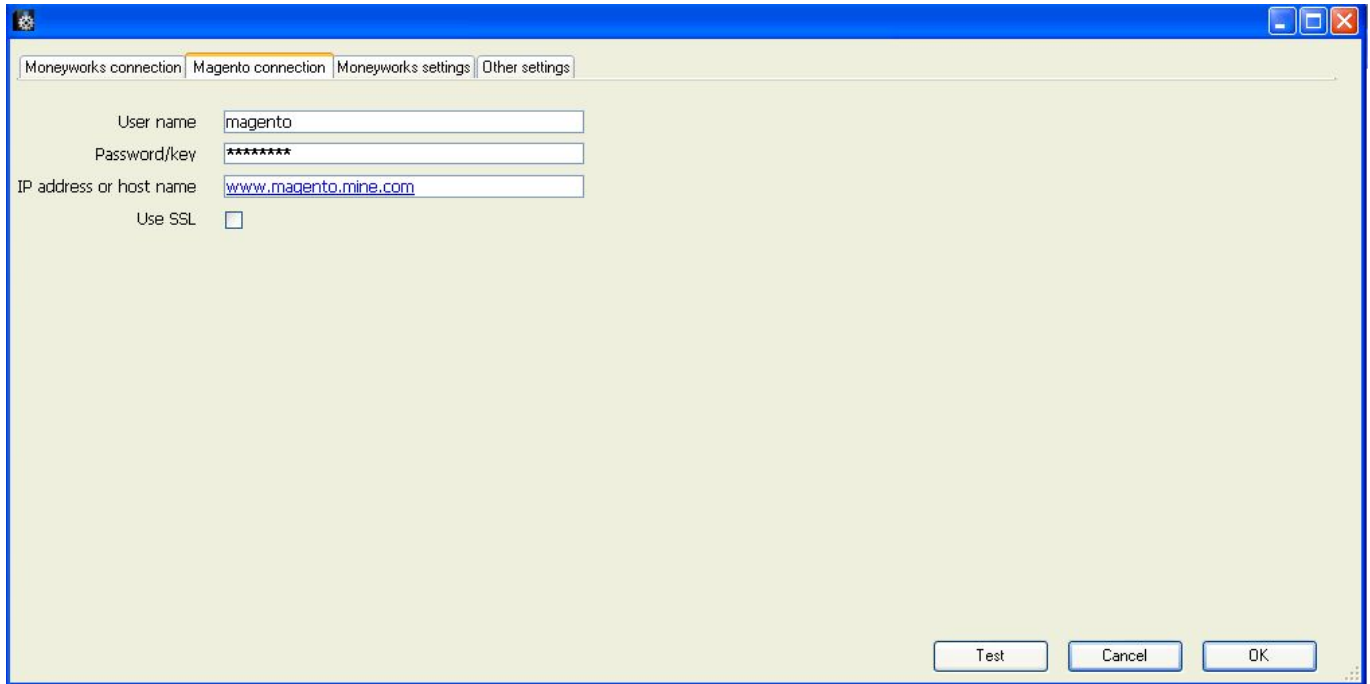

The left hand side of the tab allows you to enter the parameters for the Moneyworks connection:

- The connection type can be Local file, Gold client, or Datacentre client
- The datafile location or filename must be entered (full path must be entered if a local file)
- The location of the Moneyworks executable must be entered
- Enter the document user name and password (even if blank) in all cases
- The Gold client license key is only needed if connecting to a Gold server
- The server IP address and port number are not needed for connecting to a local file
- The DC user name and password should be entered (even if blank) if connecting to a Datacentre server, and the operating system of the Datacentre server must also be selected in this case

The right hand side of the tab allows you to send commands to Moneyworks (see the Moneyworks manual for details), and you can use the examples in the *Input* drop-down menu to check that the connection is setup correctly e.g. selecting *evaluate expr="documentpath"* and then clicking on the *Execute* button should return the Moneyworks document name/path in the *Output* box (and nothing in the *Errors* box). Clicking on *OK* will save the current connection settings, and *Cancel* will discard any changes made.

Magento connection

This tab controls how the Moneyworks Connector connects to Magento:

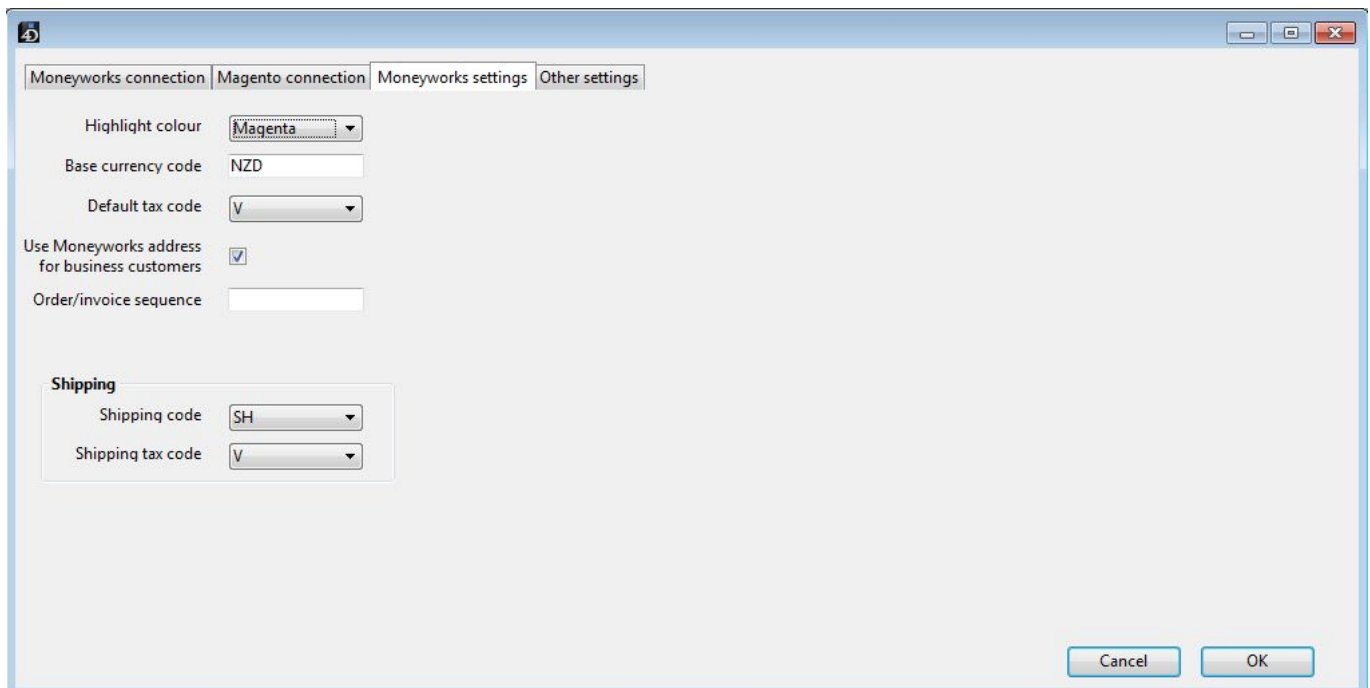

- User name as supplied by the Magento site administrator
- Password (API key) as supplied by the Magento site administrator
- IP address or hostname of the Magento site
- If a secure connection is required, check *Use SSL*

Click on the *Test* button to verify the connection

Moneyworks settings

This tab allows you to customise how imported records appear in Moneyworks:

Other settings

This tab controls the sync process itself:

The screenshot shows a window titled 'Moneyworks connection' with four tabs: 'Moneyworks connection', 'Magento connection', 'Moneyworks settings', and 'Other settings'. The 'Other settings' tab is active. It contains the following configuration options:

- Magento sync timestamp: 0000-00-00 00:00:00
- Moneyworks sync timestamp: 0000-00-00 00:00:00
- Sync interval (minutes): 0
- Generate CSV import files:
- Action if record modified on both Magento and Moneyworks since last sync:
 - Use Moneyworks
 - Use Magento
 - Prompt user

Buttons for 'Cancel' and 'OK' are located at the bottom right of the window.
