Pricebook version 3

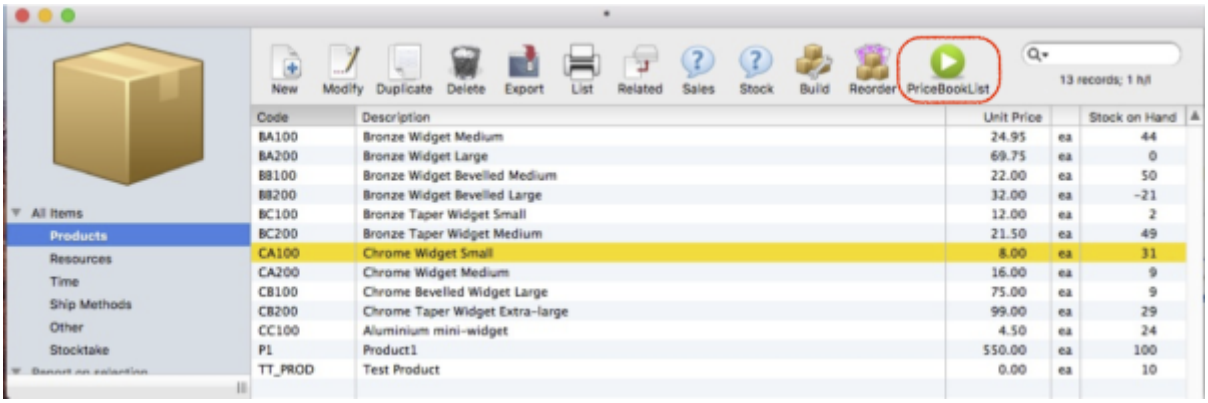

Requires: Moneyworks v8

What it does

This Moneyworks script allows you to record and use a set of prices for each product or a group of products for each of your customers or a group of customers. Prices can include price breaks for different quantities.

Setup and Installation

- Double-click the script supplied by Sustainable Solutions. Once it is installed, PriceBookList icon will be appear in toolbar of the Product table. To open Product table **Show>Product**

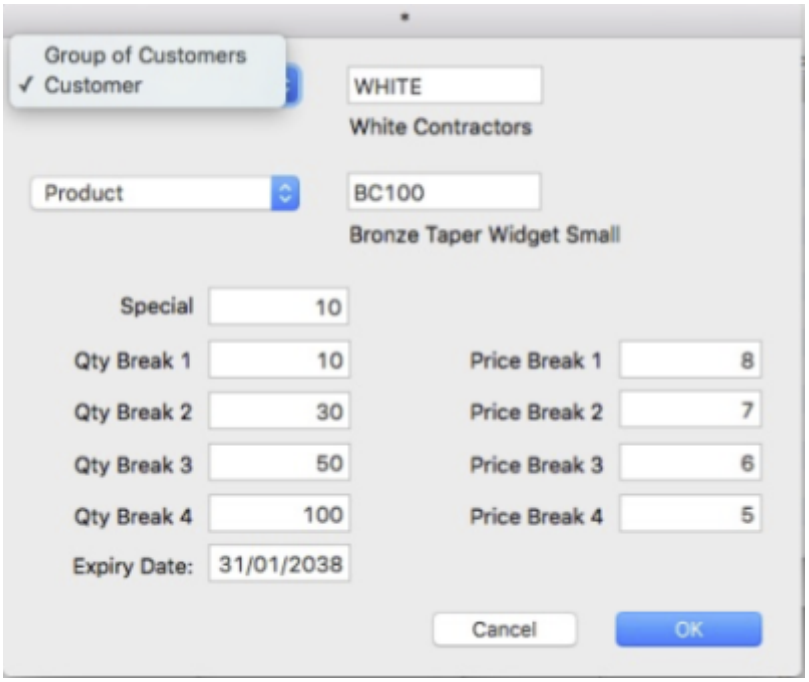

- If you have prices based on Customer group and Product group, record customer group code in Name Category 4 and Product group code in Product Category 1.

Viewing and Setting prices

1. Show the product list by choosing **Show > Products**
2. Click the **PriceBookList** button in the toolbar. You can see all the prices set for each customer/group of customers for a product/group of product in the list.
3. 

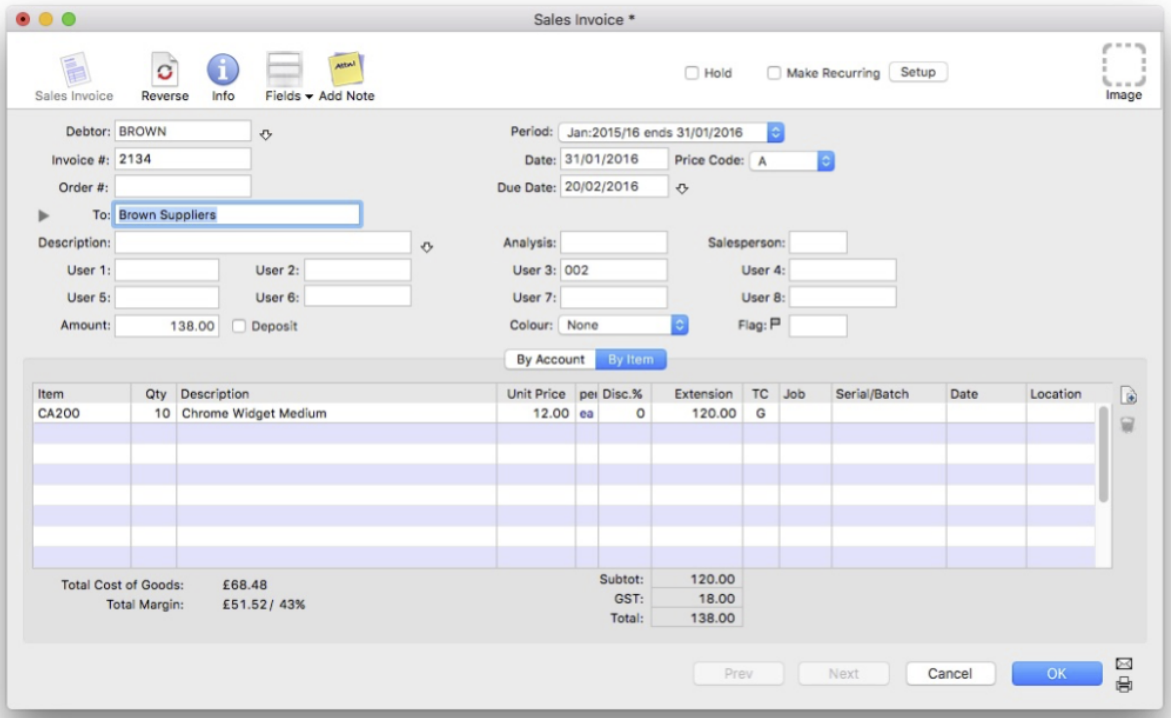

4. Click **New** button in the toolbar

5. 

6. Select **Customer** for customer code and **Group of Customer** for customer group code.
7. Select **Product** for product code and **Group of Product** for product group code.
8. You'll be alerted if you enter an invalid customer/product code.
9. You only have to fill in a **Special price**. Other fields are optional
10. If there is no expiry date for the special prices, enter a date well into the future (e.g. 1/1/50) else it will take defaut future date. You can't leave it blank.
11. You will get an alert if the record is already in the price book. You can choose to delete or edit or print the record.
12. Avoid using “Duplicate” option. This creates duplicated record but if you don’t change the record(name and item), it will create same record in pricebook data. In that case, script will not update price from pricebook because of conflict.

Using special prices

- There is nothing special you have to do. When entering a sales order or Quotes or invoices, when you select a combination of customer and product that has special pricing, that pricing will be used. See the previous report example: customer “BSUPP” has a price of $20 for the product BA100. The price is inserted automatically.

-
- If the quantity was increased to above a price break level, the price is updated to the relevant price you've specified.

Important Caveats

If you change the product or name code of an item, the special pricing information will be lost. You will have to re-enter the information for any customer/item combinations that are affected.

Technical information

This script uses Moneyworks' user2 table to store information

Field	Data stored
Key	concatenated Name SequenceNumber/Name group Code plus product SequenceNumber/product group code
Text1	Name Code/Name group Code
Text2	Product Code/Product group Code
Text	The special price(s) of the item along with the price breaks in format special_price;pricebreak1-specialprice1;pricebreak2-specialprice2;etc
Date1	The expiry date of the price. Set to 1/1/2040 if you don't want the item to expire
